Features:

1: This module uses the original chip of MTT architecture (multiple transceivers), which can expand one USB interface to 7 USB interfaces, with overcurrent protection function

2: It has the characteristics of high performance, low power consumption and low cost, and supports USB high-speed 480Mbps

3: 7 LED lights to indicate when data transmission is supported

4: With overcurrent protection function

5: Simple to use

Specification:

Interface: Micro USB, Type-C

Shipping weight: 34g

Product size: 8.4*4.39*1.5cm

Product packaging: independent electrostatic bag

Description

This module uses the original chip of MTT architecture (multi-transceiver), which can expand one USB interface to 7 USB interfaces. It has the characteristics of high performance, low power consumption and low cost. It supports USB high-speed 480Mbps, has overcurrent protection function, supports 7 LED lights indicate when data is transmitted.

● No need for any driver, directly support Windows, Linux, Android, etc., plug and play

● Intelligent identification, each USB interface has a corresponding LED, which will only light up when it is working normally

● Automatic sleep, the USB port connected to the computer has a device indicator light, when no device is inserted, the LED lights up for about 2S and automatically turns off to enter the energy-saving mode

● Original FE master, USB 2.0 480Mbps high speed

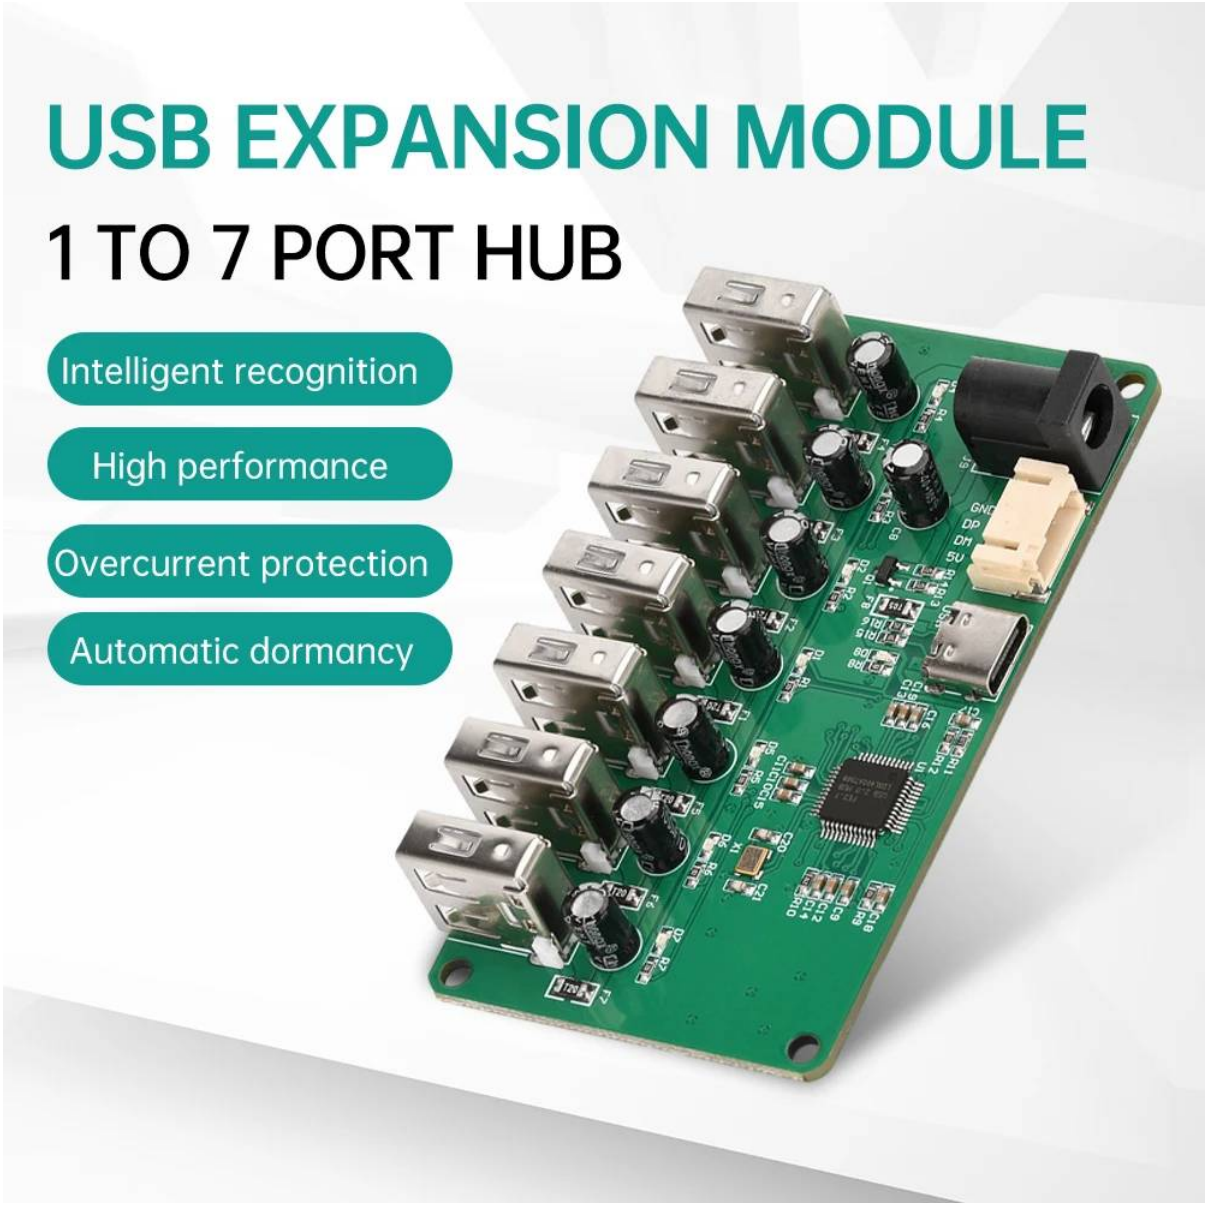

● Each USB interface has a large-capacity capacitor filter to ensure the purity of the power supply and improve stability

● Connect the computer with a 500mA fuse to protect the USB interface of the computer, and the downstream USB interface has a 2A fuse, which can drive high-current equipment

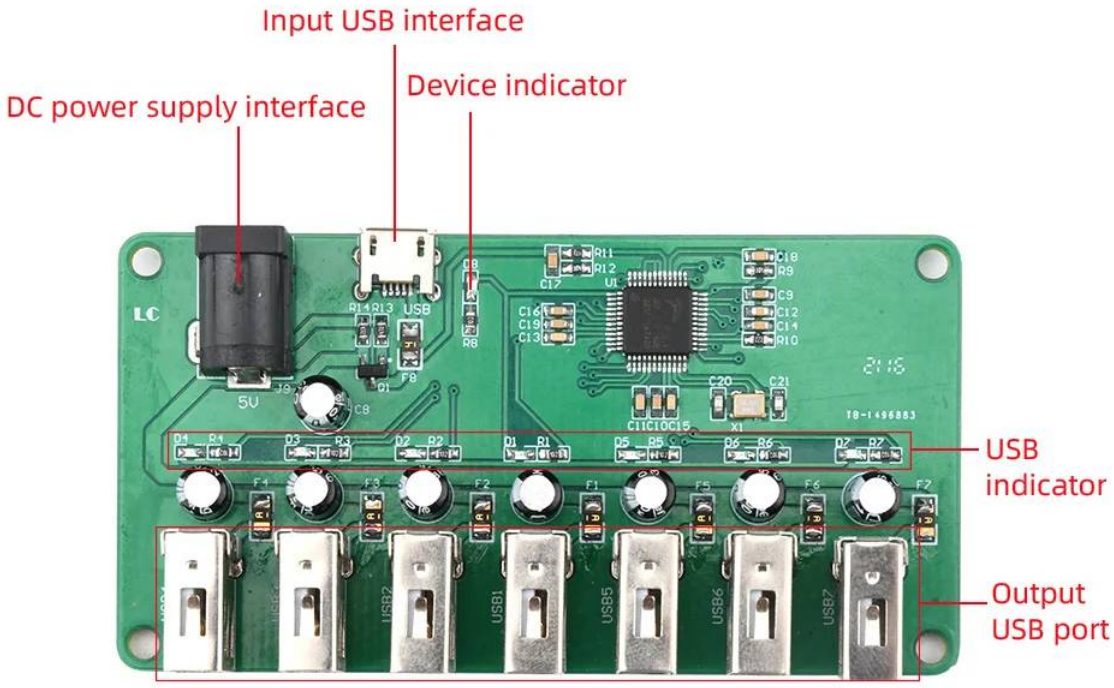

● With DC5V power supply interface, if you need to connect high-power devices such as mobile hard disks, USB 4G cards, etc., you can use an external power supply to strengthen the power supply, the microUSB/DC power supply can be seamlessly switched, and the USB port power will be automatically cut off when the DC power supply is connected.

Package includes:

1*USB expansion module

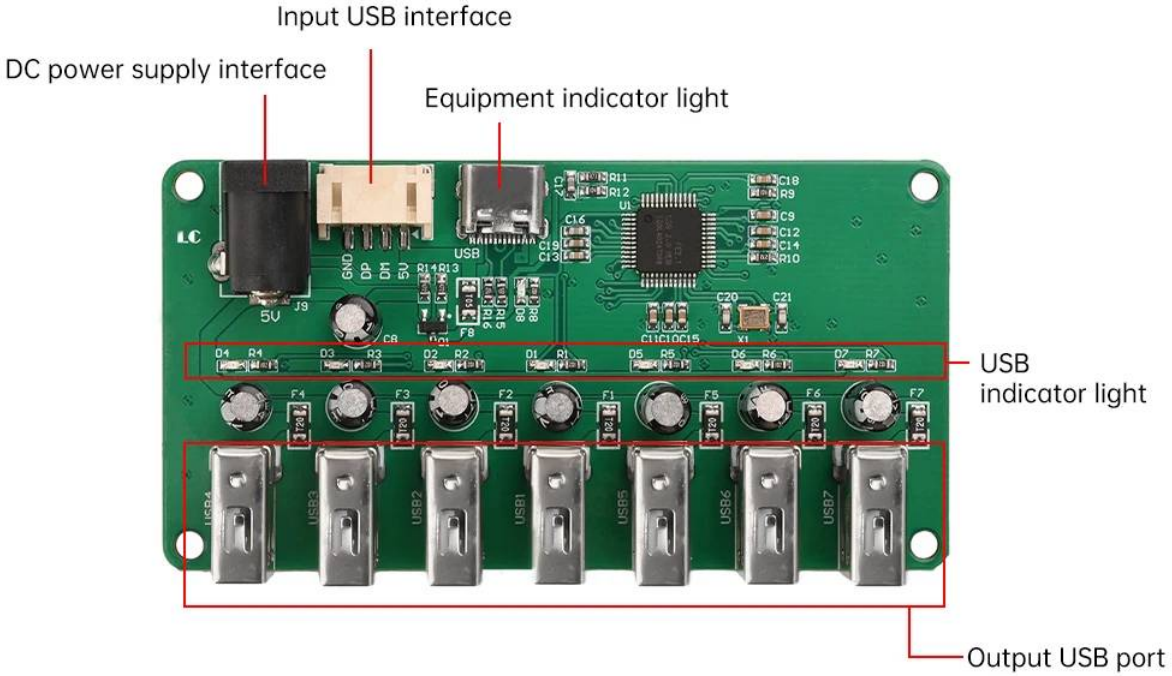

Introduction to the interface

Instructions for use

1. Connect the MICROUSB to the computer.
2. Connect USB peripherals to the downstream port.
3. If you need to connect to high-power equipment, please connect to the DC power supply

Introduction to the interface

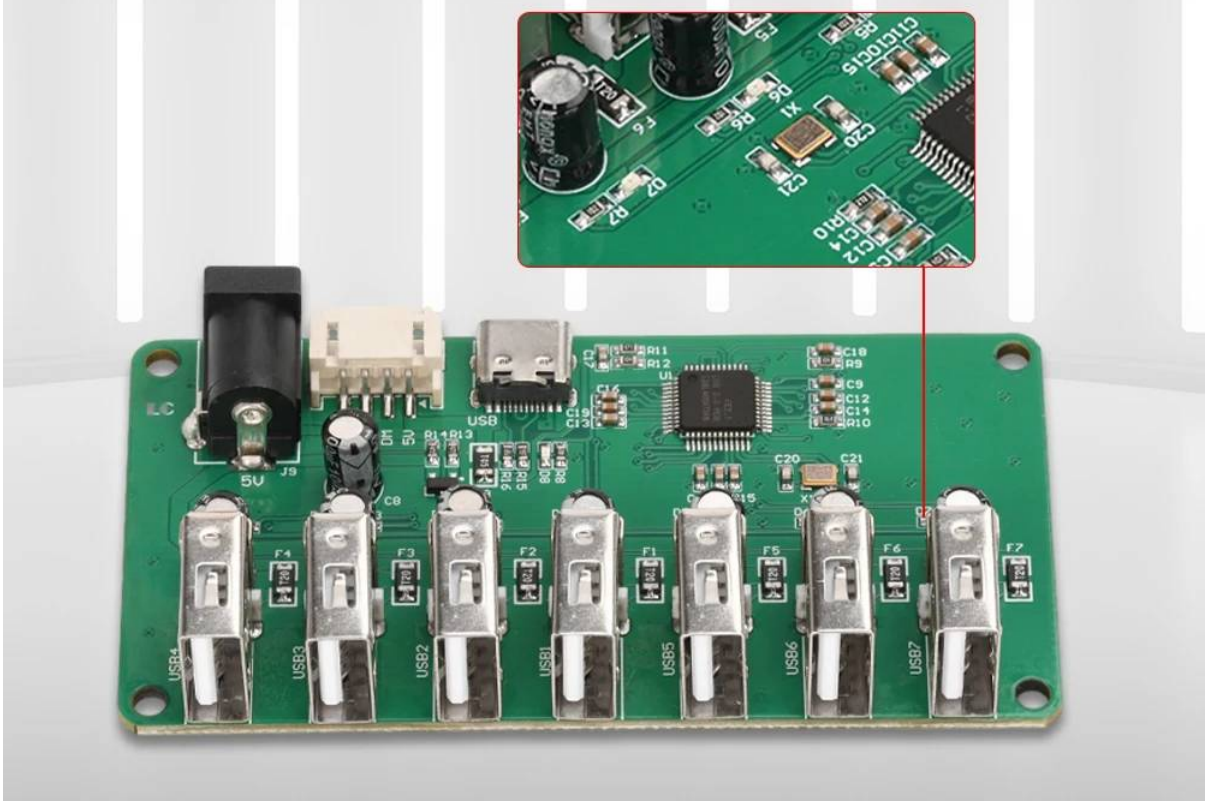

Instructions for use

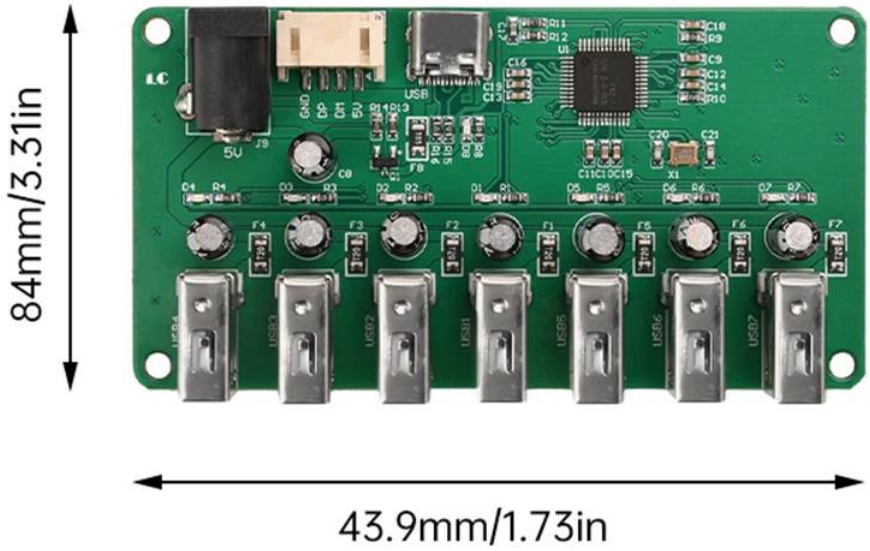

1. Connect the MICROUSB to the computer.
2. Connect USB peripherals to the downstream port.
3. If you need to connect to high-power equipment, please connect to the DC power supply

Intelligent recognition

One USB interface can be expanded to 7 USB interfaces,
each USB interface .All have corresponding LED,
which will be lit only when working normally;

Product Parameters

Ports: Micro USB port, Type-C port
Power supply interface: DC5V
Board size: 43.9*84mm

Widely used

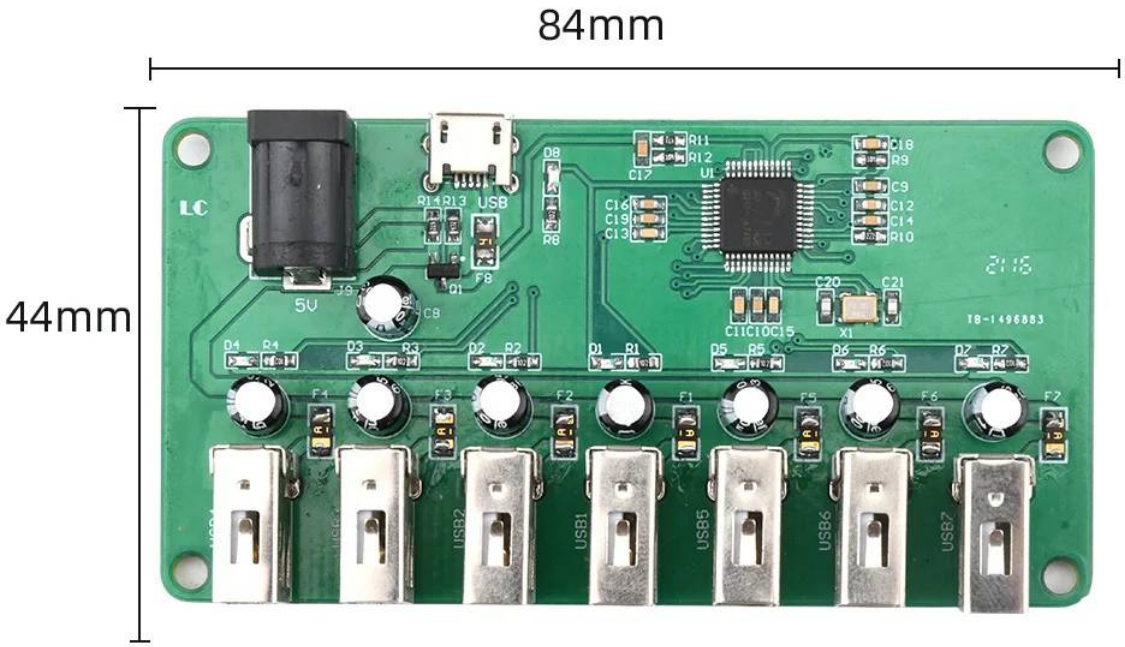

Plug and play

Without any driver, direct support for Windows, etc

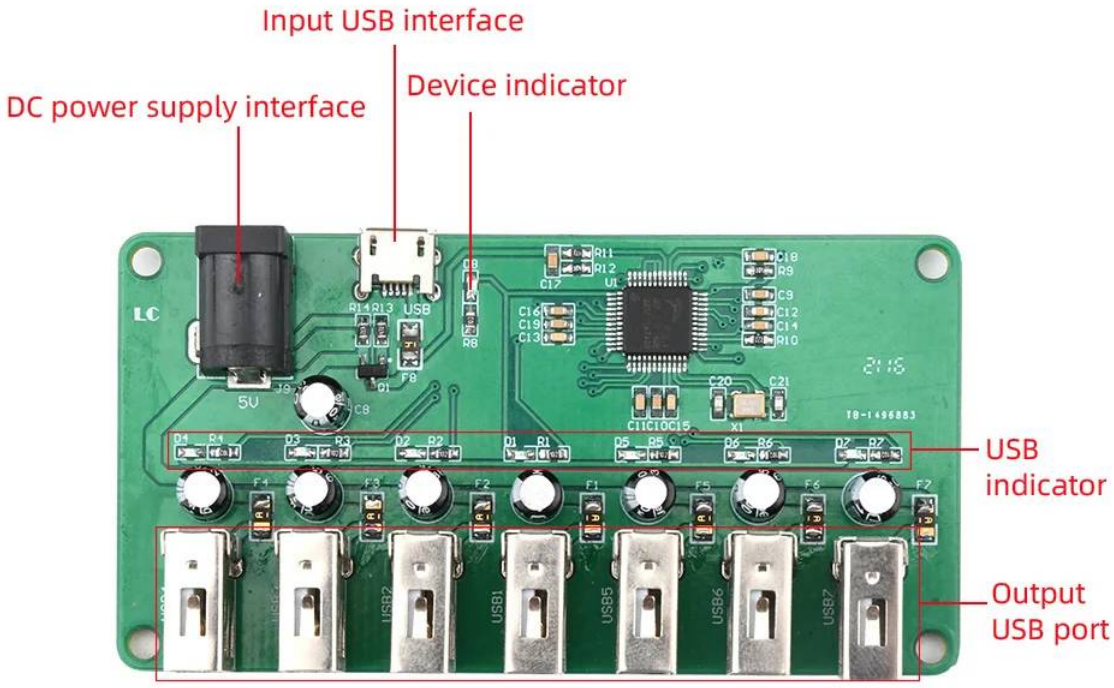

Product Size

Board size: 43.9*84mm Weight: 31g

Introduction to the interface

Instructions for use

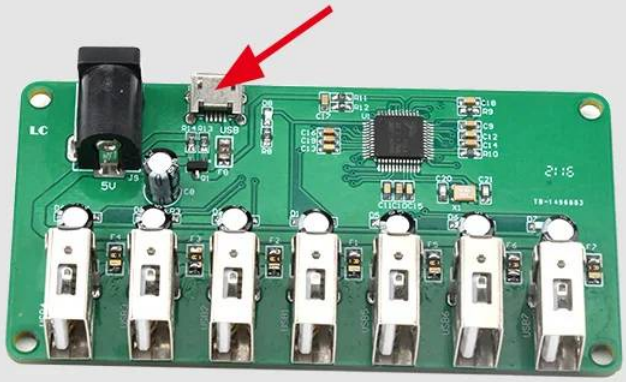

1. Connect the MICROUSB to the computer.
2. Connect USB peripherals to the downstream port.
3. If you need to connect to high-power equipment, please connect to the DC power supply

Product features

Simple design keep improving

1

Without any driver directlySupport Win dowsLinux, Android etc., plug and play

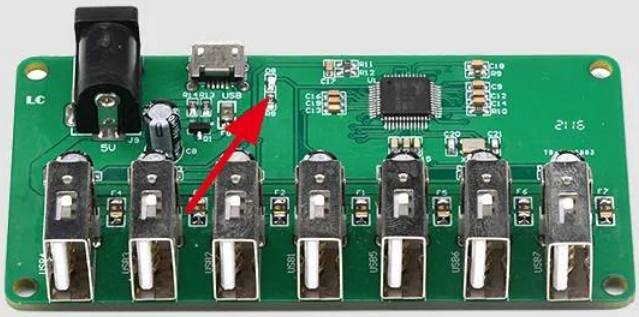

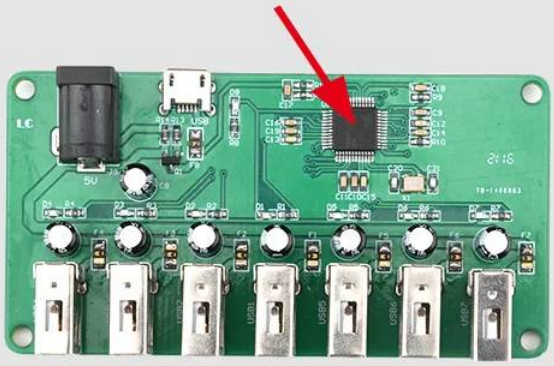

2

Intelligently recognize that each USB interface has a corresponding LED that will only light up when it is working normally

3

Automatic hibernation connected to the computer USB port with device indicatorWhen no device is plugged in, the LEDTurn on for about 2S, automatically extinguish and enteEnter energy saving mode

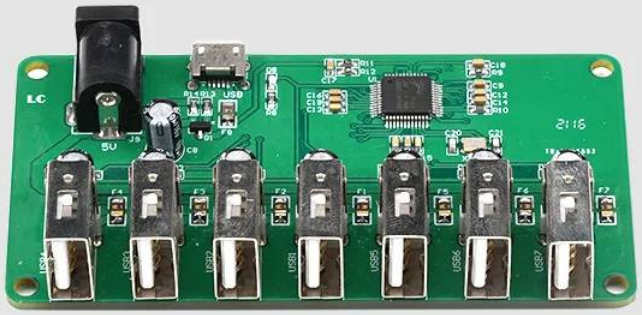

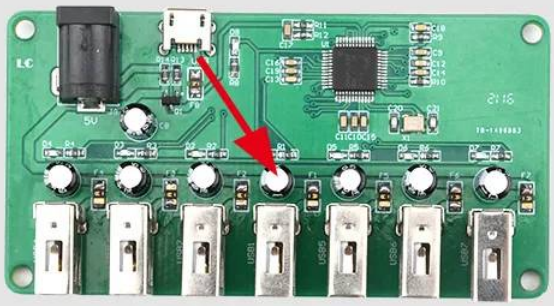

4

Original FE master, USB2.
0480MBPS high speed

5

Each USB interface has a largeCapacitor filtering to ensure electricitySource purity improves stability

6

Connect to a computer with 500MAFuse protects the com puter USB connectionPort downstream USB interface with2A fuse, can drive big electricity Streaming device

7

With DC5V power supply interface, ifNeed to connect mobile hard disk USB4GHigh -power devices such as cards which can makeStrengthen power supply with external power supplyMCRoUSB/DC power supply seamlessSwitch when DC power supply is connected, automatic Power off the USB port
